# Why Python for Data Science?

- Free and open source
- Great community
- Plenty of libraries for Data Science & Machine Learning
- Easy and intuitive to use

## Note:

• Data Science is not about programming languages/tools such as Python, R, Excel, Jupyter Notebook, Google Colab etc

• Data Science is using above tools and techniques, and if required inventing new tools and techniques, to solve a problem using "data" in a "scientific" way.
